### ABOUT US

Wildscape Restoration, Inc. is a small environmental consulting firm and landscape contractor. We offer consulting services in: habitat restoration, non-native invasive species removal, biological surveys and monitoring, environmental planning, vegetation mapping, GIS services, permit preparation, and regulatory compliance reporting. In tandem with our consulting services, Wildscape also offers contracting services such as project site preparation, clearing and grubbing, erosion control, weed abatement, fuel modification, vegetation management, collection of plant material, plant installation, irrigation installation, and site maintenance.

### DIFFERENTIATIONS

Wildscape Restoration, Inc. is a design and build habitat restoration firm. We provide both biological resource consulting and habitat mitigation implementation for a one-stop shop. This combination of services allows for efficient and successful habitat mitigation—up to 2 years ahead of schedule. This can save clients tens of thousands of dollars per acre per year. Our integrity and consistent quality improves relationships with regulatory agencies and increases responsiveness.

### FEDERAL PROJECTS

**U.S. National Park Service, Pacific West Region, Revegetation Services Blanket Purchase Agreement, Joshua Tree Vegetation Management Services**—Wildscape successfully completed the task order to cut, remove, and chemically treat 83 acres of non-native grasses and weedy native species within the Covington Flats area. Wildscape documented all herbicide usage using the Pesticide Application Record (PAR). All work was mapped with a GPS and recorded on physical field notes to ensure proper documentation.

**U.S. Forest Service, Cleveland National Forest Tamarisk Treatment**—Wildscape mapped and treated tamarisk (*Tamarix* sp.) in wildland and roadside settings on the Palomar District of the Cleveland National Forest, within the Upper San Diego River Watershed. The project locations were riparian areas in remote and rugged canyons such as, Cedar Creek, Boulder Creek, Kelly Creek, and along the Upper San Diego River itself.

**U.S. Army Corp of Engineers, Encino Groundskeeping**—Wildscape conducts general landscape maintenance on approximately 2 acres for the Encino, California facility.

**U.S. Geological Survey (USGS), Dana Point Habitat Restoration for Pacific Pocket Mouse**—Wildscape performed meticulous vegetation management to enhance 5.2 acres of previously occupied Pacific Pocket Mouse habitat.

**U.S. Forest Service, Cleveland National Forest Edible Fig Removal**—Wildscape mapped and inventoried edible fig within Trabuco and Holy Jim Canyons. Wildscape mapped the canyons along a four mile stretch and created a treatment plan using various chemical methods to test which approach was most effective for approximately 10 acres of edible fig within oak woodland and riparian habitat.

**Vandenberg Air Force Base (VAFB), Basewide Vegetation Map Update**—Wildscape prepared updated vegetation maps for the full 99,000 acre extent of VAFB with a minimum mapping unit of 5 acres. Vegetation was classified using a modified Holland system.
